01 PROFILE

12+ years of professional experience within information technology by delivering sustained results and secure environments for companies.

Major experience lies in cloud technology and security, but also in leading a team of fellow engineers to bring about the best possible technical designs and cost-efficient cloud environments.

02 EMPLOYMENT HISTORY

Sep 2018 — Present
Stockholm, Sweden

Information Security Engineer at Basefarm AB

Helping various companies in making sure they have secure cloud environments. I do for example reviews of their current setup to see if they did set up things correctly, as a team we also do pen tests and vulnerability tests against customers environments and provide them with a report of our findings. We also help from the start where we do more architectural work and make sure their new environments in the cloud get designed securely. I also helped Basefarm becoming a Managed Service Provider for AWS in this project I was fully responsible for all the security aspects required to become an MSP.

Mar 2018 — Sep 2018
Stockholm, Sweden

Senior Cloud Architect at Basefarm AB

As a Cloud Architect I help our customers design and implement the best possible solutions for AWS, GCP and Azure.

We also help them with their hybrid needs, security needs or moving them from a traditional hosting solution into the cloud.

We try to work in a DevOps way or in well outlined projects, and where possible we try to use as many managed services as possible on the cloud provider of the customer's choice to create cost-effective, automated and scalable environments.

I also help the customer to integrate their Cloud environment with Basefarm's 24/7 operations service, so they can enjoy the benefits of our 1st line support.

Another aspect of my job is to help the company come up with services they can package and sell to customers in volume.

Aug 2016 — Feb 2018
Stockholm, Sweden

Cloud Architect / DevOps at Bonnier Broadcasting

I have been working with cloud services, with a focus on AWS, as an architect. In my role, I have been in charge of the entire life cycle of migrating the company over from a traditional hosting provider to a cloud service. In the projects, it has been important to utilize as many managed services on AWS as possible in order to create a cost effective, automated and scalable environment.

I also work with the video streaming platform (cmore.se) which we host on AWS, where I have been part of creating and designing our cache solution which has enabled us to provide a better, more cost effective and more efficient streaming solution for our customers. Finally, I have worked with designing a hybrid setup which has allowed us to peer directly with high bandwidth providers, while still utilizing the flexibility of AWS.

Mar 2012 — Aug 2016
Stockholm, Sweden

Senior Technical Account Manager / Senior Technical Engineer at Basefarm AB

Worked as a senior technical account manager / senior technical engineer for multiple critical sites running on Linux, with a different set of applications running on them. I have done so for companies such as TV4, Cmore, Servicefinder, Spotify, Snowfish, Svenskt Näringsliv, Inera, Klarna, Viasat, Comhem, Dagens Nyheter and Basefarm itself.

This could be Nginx, Varnish, Tomcat, Mule, Passenger, MongoDB, MySQL or anything else we basically try to be as open as possible for our customers to find a good solution.

As a technical account manager I am responsible for making sure my customers have the best possible environments available and to make sure the team and myself are on top of any incidents that might happen.

A Technical Account is also part of other customer teams as a technical engineer our job consist of setting up new environment, design or maintain environments for our customers most of those customers demand a highly available service with no down time.

During my work days I am also responsible for multiple products such as Nginx, Newrelic my task is to make sure we have a good way to setup such products at Basefarm and to stay up to date with any security knowledge of the product. I also am the contact point if any customer from any of our offices in Netherlands, Sweden or Norway has a problem with Nginx or Newrelic.

I have also assisted the pre-sales department in reviewing architectural designs to see if we could find improvements or if I had suggestions for them

Feb 2006 — Mar 2012
Versailles, France

Customer Support / Specialist at Blizzard Entertainment

During my time at Blizzard Entertainment I have worked with multiple things. I started with Customer Support duties which included providing support for our games by e-mail, phone and internal tools including technical help.

After that I advanced within the company and started working with advance database mining to resolve to resolve technical issue for customers including providing solutions for hacked customers. I have also done QA (Quality Assurance) work such as bug investigations testing of new tools and games.

I have worked with multiple departments inside Blizzard where I have learned how online games are operated on a technical level. I have also learned much regarding how a datacenter would need to be setup to support games such as World of Warcraft and what kind of issues you can expect to get on server/Linux level, and how to resolve most of the common issues.

03 EDUCATION

Sep 2003 — Sep 2005
Rotterdam, Netherlands

ROC Zadkine

ICT Manager

The ICT manager is an ICT-generalist, active in the fields of procedures and hardware and software. As the central figure within the automation department, he/she is involved in the management, security and maintenance of the automated information system. He/she is responsible for management of both applications and infrastructure. The ICT manager is also tasked with introducing new software. He/she draws up guidelines and procedures for the management and use of the systems, and ensures that they are in fact implemented. He/she assists application managers and other system users. Together with his/her colleagues, he/she searches for solutions to automations problems.

Jul 1999 — Aug 2003
Apeldoorn, Netherlands

ROC Aventus

ICT management assistant

The most important duties of an ICT management assistant are:

- installing and setting up hard- and software;
- administering of hard- and software;
- supporting of system users.

The automated provision of information is the field of work of the ICT management assistant. He not only carries out standard procedures, but also comes up with his own solutions and procedures for specific areas. One essential component of his tasks is support for users of the information system. The ICT management assistant must be able to analyse and communicate clearly. He also is up to date on developments in his area of expertise. In his work, he is subordinate to the ICT manager and/or application manager. The ICT management assistant has skills and competences regarding the installation of software and hardware, maintenance and management of information systems and networks, ICT usage and helpdesks.
